

AI PROTOTYPING *HACKATHON*

BUILD BOLD. PROVE THE VALUE. SHIP SOMETHING REAL

INTERNAL HACKATHON 2026

TURN REAL LIFE PAINPOINTS

AI PROTOTYPES WORTH PILOTING

FIND THE PROBLEM

Where is work
slow/manual/repetitive?

What something you
want to improve?

BUILD PRACTICAL AI

Incorporate AI into your
solution

Build an
assistant/automate a
workflow/dashboard

PROVE BUSINESS VALUE

What is your solution
improving?

Show time saved, cost
avoided, quality
improved, or faster
turnaround

MOVE FROM PROTOTYPE TO PILOT

End with a demo and
next step plan

EVERY IDEA NEEDS TWO LAYERS

BUSINESS LAYER

- What problem does this solve?
- Who is the user or team affected?
- What is the business value proposition?

TECHNICAL LAYER

- What data is required?
- What model or method is used?
- What is the workflow and architecture?
- How is it evaluated?
- What safety controls are in place?

BUSINESS LAYER: **PROBLEM, USER, VALUE**

PROBLEM STATEMENT

What specific pain point is the team focusing on? How is it handled today, and what part is slow, inefficient, or error-prone?

TARGET USER

Which team or user group is affected? Who directly benefits once the idea is deployed?

VALUE PROPOSITION

Why does this matter to the business — in terms leadership can act on, not just a technical description?

TECHNICAL LAYER: **BUILDING BLOCKS**

DATA

What dataset or documents are used, and where do they come from?

MODEL

What AI method or model powers the solution

WORKFLOW

What is the end-to-end process, step by step?

ARCHITECTURE

How do the components fit together technically?

EVALUATION

How is quality and accuracy measured?

SAFETY

What controls guard against misuse or error?

DELIVERABLES CHECKLIST

- ☐ Problem Statement
 - ☐ Target user
- ☐ Chosen challenge/topic – today's process and its gaps
 - ☐ Dataset or documents used
 - ☐ AI methods or workflows chosen
 - ☐ Demo or prototype
 - ☐ Business Value Proposition
 - ☐ Impact Quantification
 - ☐ Cost vs Benefit estimate
- ☐ Responsible AI, legal & compliance check

QUANTIFY THE IMPACT; **DONT JUST CLAIM IT**

TIME SAVED

COST SAVED

QUALITY IMPROVED

FASTER TURNAROUND

COST VS BENEFIT:

PROVE THE MATH

Cost Element	What to estimate
AI/Compute cost	Model usage, API calls, infrastrucutre to run the solution
Human review cost	Time required for people to check, approve, correct AI output
Maintenance cost	Ongoing upkeep (monitoring, support)
Net Value created	Total Benefit – Total cost
Verdict	Does the technical solution save more than it costs?

RESPONSIBLE AI, LEGAL & COMPLIANCE

DATA PRIVACY

Does the solution touch
confidential or personal data?
How is it protected?

LEGAL AND REGULATORY FIT

Are there industry, regional, or
contractual rules that apply?

POLICY ALIGNMENT

Does the idea align with
existing company policy or
does it need an exception?

RUBRICS: HOW SUBMISSIONS WILL BE JUDGED

EXAMPLE OF A STRONG SUBMISSION

- ✓ States the problem and user in one clear sentence
- ✓ Quantifies impact with a defensible estimate
- ✓ Shows a working demo, not just a concept slide
- ✓ Includes a real cost-vs-benefit calculation
- ✓ Names the data, model, and safety controls used
- ✓ Flags privacy, legal, or policy considerations early
- ✓ Has a realistic path to piloting after the event
- ✓ Maps every deliverable back to this checklist

Confirm your team's problem statement, fill in the deliverables checklist as you build, and revise your pitch against the rubric before submission
